Random Checkpoint

On paper, write code that does the following:

1. Get a random whole number that is less than 1,000.

2. Get another random whole number that is less than 900.

3. Print:

      a) What happens when you add the numbers , e.g. 99 + 64 = 163
      b) What happens when you subtract the numbers , e.g. 99 - 64 = 35
